

INTER-DISCIPLINARY, PBL

Expeditionary learning lies at the heart of our inter-disciplinary, project-based learning methodology. Each expedition (or project) begins with students with a pertinent, real-life problem or issue. Students perform primary and secondary research on various aspects of the problem, analyse information, interact with experts to learn more, collaborate and brainstorm to find possible solutions to the problem – all within a learning framework. The solution is reviewed, evaluated against the goals of the expedition, and its efficacy tested. A project also takes students into the field, and engages students in real world learning experiences.

Through the process of in-depth investigation, students imbibe habits of deep and critical thinking, inquiry, team-work, respect for others’ perspectives, and a desire to resolve real-life issues in the context of the community. Simultaneously, skills such as numeracy, literacy and subject knowledge are enhanced as each expedition is embedded in the school/grade curricula.
